Re: **Notification to Adjacent Landowner(s)**
Choctaw Generation Limited Partnership, LLLP – Red Hills Operation
Ackerman, Mississippi (Choctaw County)

Dear Mr. Jones:

In accordance with the requirements of 40 CFR 257.95(g)(2), Choctaw Generation Limited Partnership, LLLP – Red Hills Operation (Red Hills) is providing notification that groundwater monitoring in the vicinity of our northwestern property boundary indicates groundwater in the uppermost aquifer may be contaminated based on one sample from a recently installed monitoring well (i.e., a boundary well) located north of the coal conveyor storm water basin. Monitored groundwater contamination is limited to the uppermost aquifer (< 32 feet deep at the boundary well), and the only parameter currently exceeding a groundwater protection standard at this well is cobalt. Per the requirements of 40 CFR 257, Subpart D – Standards of Disposal of Coal Combustion Residuals (CCR), Red Hills is currently assessing the nature and extent of the groundwater contamination and determining the corrective measures needed to address potential groundwater contamination migrating from the site.

Red Hills will provide an opportunity to comment on these corrective measures as they become available for public review. In the meantime, should you have any questions regarding this notification, please contact Jim Ward of Red Hills at (662) 387-5758.

Sincerely,

Rob Watson, Asset Manager
PE-Choctaw, Inc.
